EDUCATION

Brooklyn College, City University of New York (CUNY)

Brooklyn, NY

Master of Science in Computer and Information Science

Expected May 2028

Charusat University | Computer Science & Engineering (B. Tech)

Gujarat, India

- **GPA: 3.3/4.0**
- **Coursework:** Machine Learning, Artificial Intelligence, Data Science & Analytics, Database Management Systems, Data Structures & Algorithms, Discrete Mathematics, Software Engineering

EXPERIENCE

RP Constructions

April 2024 – Nov. 2025

Web Developer & Systems Manager

Gujarat, India

- Built and deployed a responsive company website using **TypeScript, JavaScript, and CSS**, integrating **REST APIs** for dynamic content delivery that increased online client engagement by **40%**.
- Developed **data endpoint and labelling table entities** handling **JSON** data to connect the website frontend with internal project databases, enabling real-time retrieval of project status and resource data for **10+** stakeholders.
- Administered **Windows Server** infrastructure across **30+** systems, configuring firewalls, DNS, and IP protocols; built **Tableau** dashboards tracking uptime and network health, reducing system downtime by **20%**.
- Engineered an internal project **dashboard** powered by **project APIs** and **JSON** data feeds to track resource allocation, manager assignments, and project ETAs across multi-city construction sites, giving leadership real-time visibility into operations.

Codiot Technologies LLP

Aug. 2023 – Jan. 2024

Android Developer

Gujarat, India

- Served as a **core contributor** to the **H2H mobile application development** lifecycle, architecting key design elements and functional components that enhanced user experience metrics and reduced bounce rates by approximately **25%**.
- Developed advanced technical proficiency in **Android development** frameworks, including **fragment architecture, adaptive layouts**, and activity lifecycle management, improving **application performance** and stability by **30%**.
- Partnered with **cross-functional engineering teams** in an **agile** environment, driving **project milestones** to completion while maintaining strict adherence to **software development best practices**, resulting in **20% faster sprint deliveries**.
- Spearheaded **App Store Optimization (ASO)** initiatives through comprehensive **keyword research**, metadata optimization, and **A/B testing strategies**, increasing organic discovery of **application IPV** by **40%** and user acquisition rates by approximately **35%**.
- Improved **application performance** by **28%** by optimizing **lifecycle handling** and **UI rendering**.

PROJECTS

News Trend Analytics Dashboard | Python, Pandas, News API, Matplotlib

- Collected real-time U.S. news headline datasets via **News API** and **Python**, performing **exploratory data analysis** to identify trending keywords and topic frequency across **1,000+** articles.
- Applied **text processing** techniques to extract high-frequency terms from media coverage and built **Matplotlib** visualizations highlighting keyword distributions and emerging news trends.

Heart Disease Prediction System | Python, Scikit-learn, Pandas, Matplotlib, Tableau

- Built a **machine learning** classification model using **Python** and **Scikit-learn** on a **10,000+** record clinical dataset, achieving **92%** prediction for early heart disease diagnosis.
- Conducted **statistical analysis** and **exploratory data analysis (EDA)** on **patient features**, engineering **15+** variables and visualizing key correlations using **Matplotlib** and **Tableau** dashboards.

Parking Management System integrating IoT | Python, SQL, Machine Learning, Power BI

- Designed a **predictive analytics** model using **Python** and **SQL** with an automated **ETL pipeline** and created **Power BI** dashboards displaying occupancy trends and revenue insights for **data-driven** capacity planning.

Smart Irrigation System | Python, IoT, Raspberry Pi, REST APIs, Data Pipelines

- Architected an IoT **data pipeline** with a **Python** collecting real-time sensor data and serving **data visualization** dashboards, reducing manual intervention by **90%** through automated **threshold-based triggers**.

TECHNICAL SKILLS

Languages: Python, SQL, Java, C/C++, JavaScript, Typescript, React

Data & ML Tools: Pandas, NumPy, Scikit-learn, TensorFlow, Matplotlib, Seaborn, Tableau, Power BI, Excel

Technologies: AWS (EC2), Docker, Flask, REST APIs, Machine Learning, Git, PostgreSQL

Developer Tools: VS Code, Jupyter Notebook, Postman, GitHub, JIRA, Slack
